

# Subsurface lasered optical crystal awards, gifts and trophies

## Not only excellent to receive but fantastic to give.

Internally laser etched crystal products exude quality and uniqueness. Once you embark on our 3D design process you very quickly realise this is no ordinary product.

### Trophies

Create stunning trophies for your next corporate or sporting event. Optical crystal trophies are eye-catching, desirable, and completely customisable. Select an image from our large 3D image catalogue or we can create a unique design incorporating Company logos, names/dates and details of the event.

### Corporate Gifts

Like a quality brochure or website, the gifts you give speak volumes about you and your business. Optical crystal gifts can be individualised to your customer's requirements. Forge a lasting relationship in crystal. Optical crystal products are not only excellent to receive but fantastic to give.

### Desk Pieces

Gone are the days of paperweights, these are Desk Ornaments. What better way to showcase your company logo or product. Optical crystal products will never fade or deteriorate and will continue to be a talked about and looked at product long after the stress balls and flashy dice have been lost under the desk.

### Mementos

When it comes to saying goodbye there is no other product that can capture the emotion of the occasion like optical crystal. With a little background information our designers can capture a whole career in crystal. A truly distinctive gift.

# A New Dimension! Subsurface laser engraving

We use state of the art laser technology to create customised images deep within beautiful optical crystal awards and trophies.

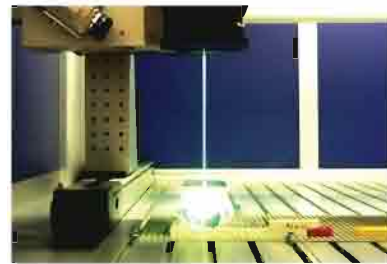

What sets this process apart from other engraving techniques is the ability to include any 3-Dimensional image (Including 3-Dimensional portraits, logos and text) and standard 2-Dimensional photographs to create unique crystal awards.

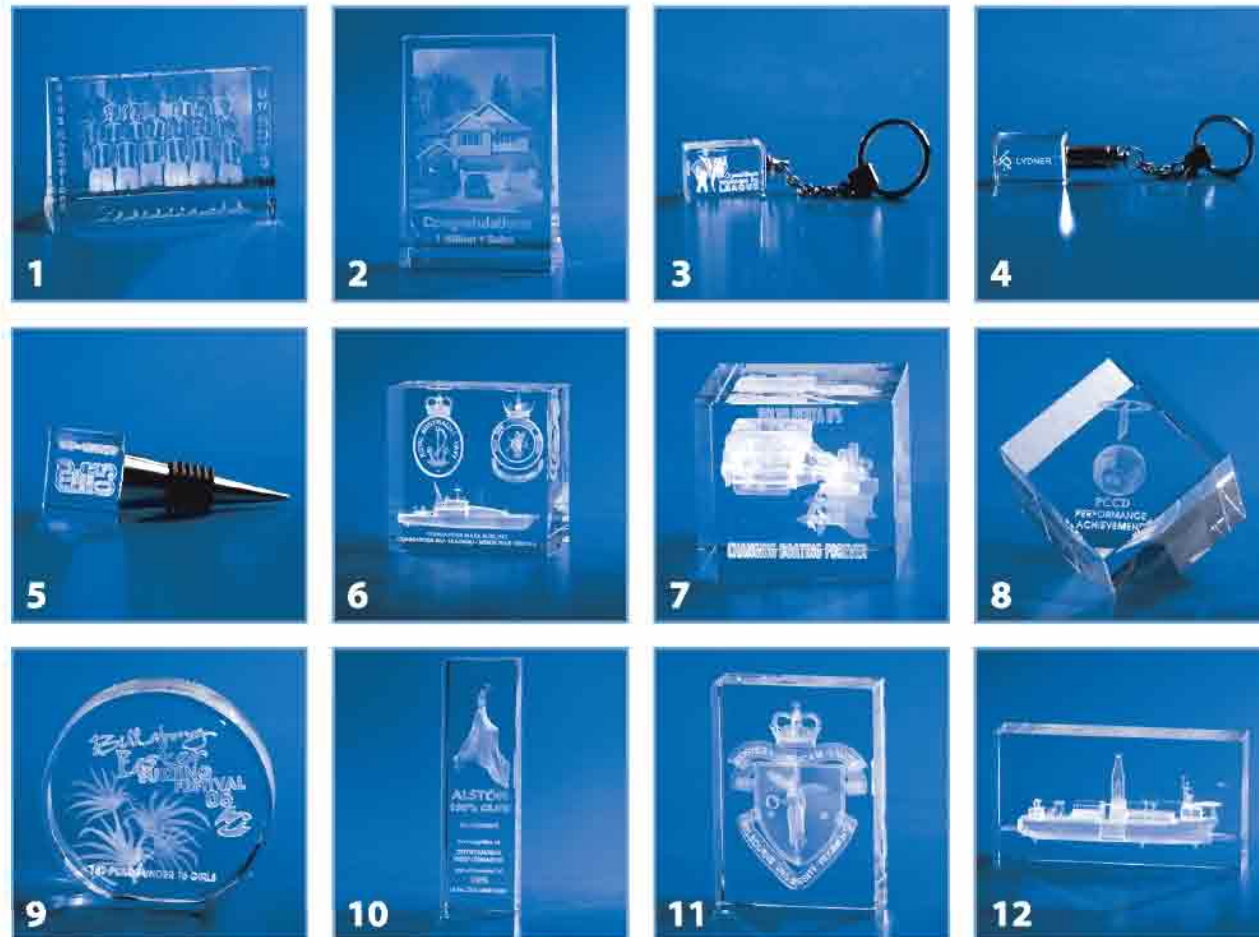

We can now create a 3-Dimensional image of a person from a flat photograph. Your trophies, awards or executive gifts will be elevated to a whole new level.

## Patented process - designed and manufactured in Australia

Proudly Australian owned and operated. The process of laser subsurface marking is a patented process. Aust patent no. 654,287. The patent covers both locally produced and imported products.
